King Clima ----- One of Specialist and Leading Manufacturer of Air Heating Solutions for Commercial Vehicles

King Clima is specialist in commercial vehicles heating solutions for over 15 years, and always take the concept of “ safe, fuel-saving, and Eco-friendly” into commercial vehicles heating solutions. As for the heating systems, we recommend our AirTronic series, Hydronic Series and Airpro series.

Airpro Series Truck Parking Heater Solutions Introduce

King Clima Airpro series diesel car heater has three models for choice, customers can choose Airpro-2000, Airpro4000 and Airpro5000 model for 2KW, 4KW and 5KW heating solutions. DC 12V and DC24V voltage, very little fuel consumption.

Features of Airpro Series Truck Parking Heater

- 2KW, 4KW and 5KW heating capacity.
- Different shell materials: Coated Plastic and Aluminum Alloy.
- DC12V or 24V Voltage
- By heating air to release heat, fuel saving (0.1L/h/kw).
- No noise and comfortable feeling.
- Very safe materials, the whole units adopt fire resistant materials to keep the drivers safe.
- Very safe control system, different types of protect devices, such as high temperature alarm to keep drivers safe.
- Eco-friendly materials, in-odorous and atoxic.
- Intelligent control system. Manual and automatic integration, intelligent variable-frequency control, eco-friendly and energy saving.
- Intelligent temperature control system. Add on temperature sensor, more accurate to control temp.
- Intelligent to tell the elevation, adjust power to suit different terrains.
- Brushless electrical machinery, long service life and high efficient.

Air Parking Heater Mounted Position Introduce

Example of the truck mounted position of parking air heater 1. The heater is installed at the foot of the co-pilot 2. The heater is mounted on the rear wall of the cab 3. The heater is installed under the driver's seat backrest 4, the heater is installed in the toolbox	Location map of the parking air heater installed on the RV: 1. The heater is installed before the co-pilot 2. The heater is installed between the driving position and co-pilot position 3. the heater is installed under the bottom 4. the heater is installed under the container 5. the heater is installed in the trunk
Location map of installing a parking air heater for a 5/7 passenger car: The five-seat/seven-seat passenger car mainly installs the heater in the passenger compartment or trunk of the vehicle. If it cannot be installed in the passenger compartment or the trunk, the heater can also be fixed under the vehicle's bottom, but attention should be paid to the waterproof spray. splash.	Location map of the parking air heater installed on the construction vehicle: 1. The heater is installed in the cabinet of the driver's seat. 2. The heater is mounted on the rear wall of the cab 3. The heater is installed in the protection box.

Technical of AirTronic Series Sleeper Cab Heater

Model	Airpro2000	Airpro4000	Airpro5000
Voltage	DC12V or DC24V		
Housing Material	Coated Plastic	Coated Plastic	Aluminum Alloy
Heating Power	900-5000KW	900-5000KW	900-5000KW
Fuel Consumption	0.10~0.24L/H	0.10~0.24L/H	0.10~0.24L/H
Minimum Operating Temperature	-40 ° C	-40 ° C	-40 ° C
